《数据库应用实践》课程报告

学号：102102145

姓名：胡嘉鑫

年级：大三

学院：计算机与大数据学院

专业：数据科学与大数据技术

本组其它成员：学号_____姓名_____

学号_____姓名_____

实验时间：2023－2024 学年第一学期

任课教师：程烨

《数据库应用实践》实验一：数据库管理系统及其应用开发环境的创建使用

胡嘉鑫　　102102145

2023 年 11 月 18 日

目录

1 实验目的

了解数据库应用开发环境的建立与使用；掌握 SQL 语言的使用；通过实践理解关系数据模型的相关概念；掌握数据库应用开发环境的使用；掌握创建、删除数据库的方法；掌握创建基本表、查看表属性、修改属性的方法；掌握向表中添加、删除以及修改数据的方法；掌握查询分析器的使用方法；掌握查询语句在单表查询中的应用；掌握复杂查询、多表查询的方法；掌握视图的使用方法；巩固数据库的基础知识.

2 实验预备内容

1. 阅读教材《数据库系统概论》第三章关系数据库标准语言 SQL.
2. 阅读实验使用的数据库管理系统的相关参考资料.

3 实验环境

- OS: Linux
- DBMS: OpenGauss DataBase

4 实验内容

4.1 所设计的数据库和表的情况简介

4.1.1 应用场景

商家用来管理产品、顾客、订单、供应商等的数据库 (commerce).

1. 产品数据;
2. 顾客数据;
3. 订单数据;
4. 供应商数据.

4.1.2 vendors 表

vendors 表存储销售产品的供应商. 每个供应商在这个表中有一个记录,供应商 ID(vend_id) 列用来匹配产品和供应商. 这个表用 vend_id 作为主键.vend_id 为自动增量字段.

表 1: vendors

列	说明
vend_id	唯一的供应商 ID
vend_name	供应商名
vend_address	供应商的地址
vend_city	供应商的城市
vend_state	供应商的州
vend_zip	供应商的邮政编码
vend_country	供应商的国家

4.1.3 products 表

products 表包含产品列表，每行一个产品. 每个产品有唯一的 ID (prod_id 列)，通过 vend_id(供应商的唯一 ID) 关联到它的供应商. 这个表用 prod_id 作为其主键. 同时在 vend_id 上定义一个外键，关联到 vendors 的 vend_id.

表 2: products

列	说明
prod_id	唯一的产品 ID
vend_id	产品供应商 ID(关联到 vendors 表中的 vend_id)
prod_name	产品名
prod_price	产品价格
prod_desc	产品描述

4.1.4 customers 表

customers 表存储所有顾客信息. 每个顾客有唯一 ID(cust_id). 这个表用 cust_id 作为主键.cust_id 是自动增量字段.

表 3: customers

列	说明
cust_id	唯一的顾客 ID
cust_name	顾客名
cust_address	顾客的地址
cust_city	顾客的城市
cust_state	顾客的州
cust_zip	顾客的邮政编码
cust_country	顾客的国家
cust_contact	顾客的联系名
cust_email	顾客的联系 email 地址

4.1.5 orders 表

orders 表存储顾客订单. 每个订单编号唯一 (order_num). 订单用 cust_id 列 (关联到 customer 表的顾客唯一 ID) 与相应顾客关联. 这个表用 order_num 作为主键.order_num 是自动增量字段. 同时在 cust_id 上定义一个外键，关联到 customers 的 cust_id.

表 4: orders

列	说明
order_num	唯一订单号
order_date	订单日期
cust_id	订单顾客 ID (关系到 customers 表的 cust_id)

4.1.6 orderitems 表

orderitems 表存储每个订单中的实际物品，每个订单的每个物品占一行. 对 orders 中的每一行，orderitems 中有一行或多行. 每个订单物品由订单号加订单物品 (第一个物品、第二个物品等) 唯一标识. 订单物品通过 order_num 列 (关联到 orders 中订单的唯一 ID) 与它们相应的订单相关联.

表 5: orderitems

列	说明
order_num	订单号 (关联到 orders 表的 order_num)
order_item	订单物品号 (在某个订单中的顺序)
prod_id	产品 ID(关联到 products 表的 prod_id)
quantity	物品数量
item_price	物品价格

4.1.7 productnotes 表

productnotes 表存储与特定产品有关的注释. 并非所有产品都有相关的注释，而有的产品可能有许多相关的注释. 这个表用 note_id 作为其主键.

表 6: productnotes

列	说明
note_id	唯一注释 ID
prod_id	产品 ID(对应于 products 表中的 prod_id)
note_date	增加注释的日期
note_text	注释文本

4.2 熟悉 DBMS 实验环境

了解华为 openGauss 数据库的安装过程及相关工具的使用方法.

```
[test@db1 ~]$ gs_om -t status
-----------------------------------------------------------------------

cluster_name     : dbCluster
cluster_state    : Normal
redistributing   : No

-----------------------------------------------------------------------
[test@db1 ~]$
```

图 1: openGauss 数据库相关工具的使用和安装情况

4.3 创建数据库，创建并维护基本表的结构和数据

以下内容使用 SQL 语句完成:

1. 设计一个应用场景，创建符合该应用需求的应用数据库.

```
-- 应用需求如 4.1 节所述
create database commerce;
```

```
commerce=# \l
                              List of databases
   Name    | Owner | Encoding | Collate | Ctype | Access privileges
-----------+-------+----------+---------+-------+-------------------
 commerce  | test  | UTF8     | C       | C     |
 postgres  | test  | UTF8     | C       | C     |
 template0 | test  | UTF8     | C       | C     | =c/test          +
           |       |          |         |       | test=CTc/test
 template1 | test  | UTF8     | C       | C     | =c/test          +
           |       |          |         |       | test=CTc/test
(4 rows)

commerce=#
```

图 2: 创建数据库 commerce

2. 在该数据库中创建至少 4 个相互关联的基本表，并设置主键、外键、自定义完整性约束 (非空、唯一、默认值、check).

```
-- Create customers table
CREATE SEQUENCE customers_id_seq
START WITH 1
INCREMENT BY 1
NO MINVALUE
NO MAXVALUE
CACHE 1;
CREATE TABLE customers
(
  cust_id      int       PRIMARY KEY default
↪  nextval('customers_id_seq'::regclass),
  cust_name    char(50)  NOT NULL ,
```

```
  cust_address char(50)  NULL ,
  cust_city    char(50)  NULL ,
  cust_state   char(5)   NULL ,
  cust_zip     char(10)  NULL ,
  cust_country char(50)  NULL ,
  cust_contact char(50)  NULL ,
  cust_email   char(255) NULL
);

-- Create orderitems table
CREATE TABLE orderitems
(
  order_num  int          NOT NULL ,
  order_item int          NOT NULL ,
  prod_id    char(10)     NOT NULL ,
  quantity   int          NOT NULL ,
  item_price decimal(8,2) NOT NULL ,
  PRIMARY KEY (order_num, order_item)
);

-- Create orders table
CREATE SEQUENCE orders_id_seq
START WITH 1
INCREMENT BY 1
NO MINVALUE
NO MAXVALUE
CACHE 1;
CREATE TABLE orders
(
  order_num  int      NOT NULL PRIMARY KEY default
↪  nextval('orders_id_seq'::regclass),
  order_date date NOT NULL ,
  cust_id    int      NOT NULL
);

-- Create products table
```

```
CREATE TABLE products
(
  prod_id    char(10)      NOT NULL,
  vend_id    int           NOT NULL ,
  prod_name  char(255)     NOT NULL ,
  prod_price decimal(8,2)  NOT NULL ,
  prod_desc  text          NULL ,
  PRIMARY KEY(prod_id)
);

-- Create vendors table
CREATE SEQUENCE vendors_id_seq
START WITH 1
INCREMENT BY 1
NO MINVALUE
NO MAXVALUE
CACHE 1;
CREATE TABLE vendors

    "orders_pkey" PRIMARY KEY, btree (order_num) TABLESPACE pg_default
Foreign-key constraints:
    "fk_orders_customers" FOREIGN KEY (cust_id) REFERENCES customers(cust_id)
Referenced by:
    TABLE "orderitems" CONSTRAINT "fk_orderitems_orders" FOREIGN KEY (order_num) REFERENCES orders(order_num)

commerce=#
```

图 9: 对表进行修改操作

4. 创建索引及删除索引.

```
CREATE INDEX product_index ON products(prod_name);
DROP INDEX product_index;
```

```
commerce=# CREATE INDEX product_index ON products(prod_name);
CREATE INDEX
commerce=# DROP INDEX product_index;
DROP INDEX
commerce=#
```

图 10: 创建及删除索引

5. 向表中录入若干数据，对表中数据进行修改和删除操作.

```
-- Customers table
INSERT INTO customers(cust_id, cust_name, cust_address, cust_city,
↪  cust_state, cust_zip, cust_country, cust_contact, cust_email)

4.4 数据库查询，视图使用

在创建的表中自行设计实现以下查询：

1. 单表查询.

```
SELECT prod_id, prod_name, prod_price FROM products;
```

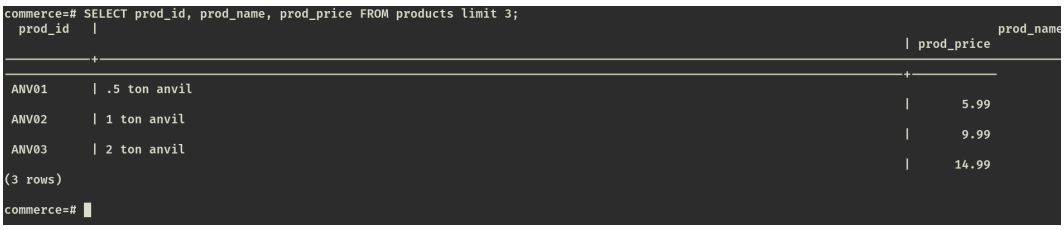

图 19: 单表查询

2. 多表连接查询并排序输出.

```sql
SELECT vend_name, prod_name, prod_price
FROM vendors, products
WHERE vendors.vend_id = products.vend_id
ORDER BY vend_name, prod_name;
```

```
commerce=# SELECT vend_name, prod_name, prod_price
FROM vendors, products
WHERE vendors.vend_id = products.vend_id
ORDER BY vend_name, prod_name;

                 |       5.99
```

图 20: 多表连接查询并排序输出

3. 使用聚集函数的查询.

```sql
SELECT COUNT(*) AS num_cust FROM customers;
```

```
commerce=# SELECT COUNT(*) AS num_cust FROM customers;
 num_cust
----------
        5
(1 row)

commerce=#
```

图 21: 使用聚集函数的查询

4. 分组查询.

```
SELECT vend_id, COUNT(*) AS num_prods FROM products
GROUP BY vend_id;
```

```
commerce=# SELECT vend_id, COUNT(*) AS num_prods FROM products
commerce-# GROUP BY vend_id;
 vend_id | num_prods
---------+-----------
    1001 |         3
    1003 |         7
    1005 |         2
    1002 |         2
(4 rows)

commerce=#
```

图 22: 分组查询

5. 嵌套查询.

```
SELECT cust_name, cust_contact FROM customers
WHERE cust_id IN (SELECT cust_id FROM orders
  WHERE order_num IN (SELECT order_num FROM orderitems
    WHERE prod_id = 'TNT2'));
```

```
commerce=# SELECT cust_name, cust_contact FROM customers
commerce-# WHERE cust_id IN (SELECT cust_id FROM orders
commerce(#   WHERE order_num IN (SELECT order_num FROM orderitems
commerce(#     WHERE prod_id = 'TNT2'));
                cust_name                |                cust_contact
-----------------------------------------+---------------------------------------------
 Coyote Inc.                             | Y Lee
 Yosemite Place                          | Y Sam
(2 rows)

commerce=#
```

图 23: 嵌套查询

6. 创建并使用视图查询.

```sql
-- 创建视图
CREATE VIEW productcustomers AS
SELECT cust_name, cust_contact, prod_id
FROM customers, orders, orderitems
WHERE customers.cust_id = orders.cust_id
AND orderitems.order_num = orders.order_num;

-- 查询
SELECT cust_name, cust_contact FROM productcustomers WHERE prod_id
↪  = 'TNT2';
```

```
commerce=#
commerce=# CREATE VIEW productcustomers AS
commerce-# SELECT cust_name, cust_contact, prod_id
commerce-# FROM customers, orders, orderitems
commerce-# WHERE customers.cust_id = orders.cust_id
commerce-# AND orderitems.order_num = orders.order_num;
CREATE VIEW
commerce=# SELECT cust_name, cust_contact FROM productcustomers WHERE prod_id = 'TNT2';
                    cust_name                     |
  cust_contact
------------------------------------------------------+--------------------
-----------------------------------
 Coyote Inc.                                          | Y Lee

 Yosemite Place                                       | Y Sam

(2 rows)

commerce=#
```

图 24: 创建并使用视图查询

4.5 实验总结

4.5.1 实验涉及的相关知识

- Linux 命令的使用.
- openGauss 数据库的安装和基本使用.
- 数据库的创建.
- 表的创建和修改.
- 索引的创建和删除.
- 视图的创建和使用.
- 表的完整性及其约束的设计.
- 表的数据的插入、更新、删除.
- 单表查询.
- 多表连接查询.
- 嵌套查询.
- 聚合查询.

4.5.2 实验遇到的问题及其解决

没有问题.
